 Semantic Quality Evaluation (Gold Standard Matrix)

This tab tests the **actual quality and meaning** of the open-source models' outputs by mathematically comparing them against a "Golden Answer". We use a powerful **Cloudflare Model** (like Llama 3.3 70B) as the ultimate Judge to generate the perfect reference answer, and then we use semantic embeddings (Cosine Similarity) to see which open-source model matches it closest!

The provided parliamentary data appears to be a list of grants or funding allocations to various organizations, publications, and parties. The data is categorized into different sections, with each section listing the name of the recipient and the amount of funding allocated. The amounts range from 3,000 to 100,000 rupees, indicating a wide range of funding levels. The recipients include publications, media outlets, educational institutions, and social organizations.

The data suggests that the funding is being allocated to support a diverse range of activities and initiatives. Some of the recipients, such as the India Foundation for Development and the C.Achutha Menon Centre, appear to be focused on social and economic development. Others, such as the Public Relation Society of India and the Institute of Chartered Accountants of India, seem to be professional organizations. The funding is also being allocated to support media outlets, such as Mass Media and The Sunday Post, as well as educational institutions, such as Fr.Angel School and Symbiosh Institute of International Business.

The funding allocations are being made by different entities, including PGCIL and THDC. The data does not provide information on the specific purposes or criteria for the funding allocations. However, it is clear that the funding is being allocated to support a wide range of activities and initiatives across different sectors. The recipients include organizations and publications from various parts of the country, indicating a national scope for the funding allocations. Overall, the data provides a snapshot of the funding landscape for these organizations and publications, but further information would be needed to understand the context and implications of these allocations.
